

OOB::KLASSE (TEMPLATE)

Erfinder Alan Kay

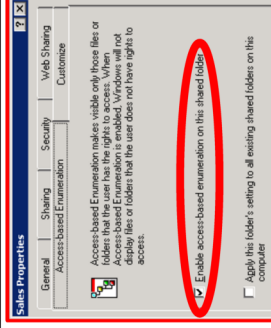

Jahr ~1993

The inventor of the programming language Smalltalk was the first who used objects in software development, that's the reason why it is called "object oriented" Programming Language. Gutenberg and the letters of his printing presses was another example. A class is a single template for part of a complete software, e.g. "Name, address, location, phone, ..." would be a template for a person in an address database.

Anwendungsfälle

Simplification/standardization through "pre-printed (software) templates"

Access Based Enumeration

Erfinder CIA

Year ~?

Depending on the authorization, folders are displayed or not in the Windows Network Neighbourhood. Can easily also be applied on social media or other platforms. You need something to assign the user to a record eg. IP, Face Recognition, RFID.... Then you can eg. split the society: access based censorship, send people in the right or wrong directing (discrimination / Stanford prison "experiment")

Anwendungsfälle

Censorship or "secrecy", manipulation
