

Ink blot test / fixation (psychology)

Inventor Hermann Rorschach

Year ~1900

Sold as a "phantasy test with formless blobs for children, normal adults and for mentally ill", in fact it **distracts the questioned** (fixation 1), with a simple RFID or LC circuit stuck on the backside of the paper it's also possible to activate small Active Denial Systems, Hum Noises or treble Sounds around 15'000Hz below the conscious perception threshold (fixation 2...)

Use Cases

As a "Lie detector" but mostly to distract from the survey and the attempt to read out private thoughts and emotions ...

Global Warfare

Inventor Satan

Year ~0

After the CIA most likely blew up the Twin Towers itself, George W. Bush declared accused countries media-effective to Terrorist-Countries (the Islamic areas are the oil-rich areas; source Prof. Dr. Daniele Ganser @Unibasel) In Western Media quite suggestive: "The War AGAINST Terror is only beginning" and many of us unfortunately believed the lie, in fact it was imperialism "promoted" by weapons industry, all lost, except those who sold Surveillance & Arms

Use Cases

Unfortunately to many use cases, to expose such things is dangerous. **The weapon industry unfortunately has no mercy with killing innocents for more profit**
