

ARTIFICIAL INTELLIGENCE

Inventor: xxxxx
Artificial Intelligenc, but also Propositional calculus (German: Prädikatenlogik (= eg PROLOG) or learning algorithms, the so called singularity is maybe already here, which would explain why I kept when in the end of the Movie "Artificial Intelligence" finally sees his "mother" again. But this should not be his mother, but his equal aged mental mother that showed him the women side of the world so many years ago. Companies are Artificial Intelligences too, but mostly from the dark side of the force.

Use Cases

Controlly your **touring complete** Avatar and say something if he suggests wrong things

Access Based Enumeration

Access-based Enumeration makes visible only those files or folders that the user has the rights to access. When Access-based Enumeration is enabled, Windows will not display files or folders that the user does not have rights to access.

✓ Enable access-based enumeration on this shared folder.

Inventor CIA

Year ~?

Depending on the authorization, folders are displayed or not in the Windows Network Neighbourhood. Can easily also be applied on social media or other platforms. You need something to assign the user to a record eg. IP, Face Recognition, RFID.... Then you can eg. split the society: access based censorship, send people in the right or wrong directing (discrimination / Stanford prison "experiment")

Use Cases

Censorship, manipulation or "secrecy"

Observer Pattern

Inventor Erich Gamma, Richard Helm ... ~1994
The observer pattern (also called listener pattern) is a design pattern in software development. It belongs to the category of behavior patterns. In the programming language Java it would be **public interface Observer** and it would be used with **"implements Observer"** (needs exercise) It does not mean "surveillance" its a computer science Term.

Use Cases

To transfer changes to objects to a complete structures that dependent on this object, ev. an application with different views

NORMAL-DISTRIBUTION

Inventor Carl Friedrich Gauß Year ~1801
E.g. the distribution of intelligence in society, but could be also the size of people, the number of households with kitchen mixer, but there one would have to find out whether it is really normal-distributed, "paranormal-distributed" or traits are distributed, for example also personality traits are normal-distributed, but you still can create classes of people by using Mayer-Briggs test

Use Cases

Statistics, to check plausibilities of Statements, to find out who in town holds shares of kitchen mixer producers

DESIGN PATTERN(S)

Inventor Architekt Christopher Alexander ~1977
Design patterns are proven solution templates for recurring design problems in architecture as well as in software development.

A design pattern usually contains several classes (templates), so a single design pattern is a collection of different templates. E.g. The shape of a single step of stairs **AND** the railing (steelwork or eg woodwork) for the complete stairs **AND** for example the shape for the carpet of each step

Use Cases

Architecture, Software development, psychology (Archetypes), Sociology (Archetype-Combinations)

SYSTEM-THEORIE

Inventor: Niklas Luhmann

Year: ~1914

A System is made out of Elements [E] or several TSubsystems (= abstracted an Element too). The Elements have relations (Relations [R]) and the relations have (German: Konditionierende [K]) that describes how the Relations have to be and could for example filter some Selectors / Keywords from Languages you don't know eg. the Law or the Bible or the Koran(?) or Karl Marx "Das Kapital" could be such "Konditionierende"

Use Cases

This helps to understand the big picture, Sozial-, Mechanical-, Biological-, Computer-Systemes oder Software.
