

MICRO-SPIES

Erfinder: xxxx

Jahr: ~xxxx
Electronics Book for Kids, Verlag: Stuttgart Frech,
1977

Anwendungsfälle:

"Maybe" less than "up to 8 Miles" :)

Active Denial System

Inventor US Air Force

Year ~1980

The Active Denial System roasts the top layer of the skin at a distance of 500m. For a range of 5 m logically more than 100 x smaller, small enough to fit in a cell phone. Actually, 1930s electron tube technology, but today you can do this also with semiconductors (Esaki-/Tunnel diode). Directly in the CPU with Army-Grade Crypto . The "Active Denial System"-denialer would thus be the natural archnemesis of an TinFoil-hat

Use Cases

To roast Victims cowardly at a range of 500m or terrorize lodger with such scrap for "fun and profit"
