

Chemitrode

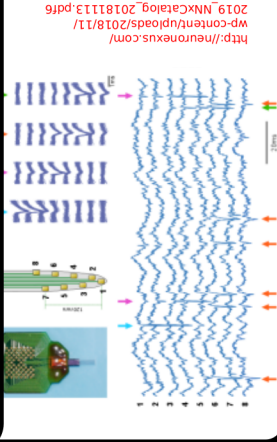

Inventor José Manuel Rodríguez Delgado ~1950
Implants which release chemical substances / drugs that can be triggered via remote and in the case of e.g. Adrenaline metabolism-promoting substances aggression, in the case of melatonin metabolism sleepiness. Can rob the victim's attention, but can also trigger the victim a suicide or amok run. ("carrot and stick")

Use Cases

Medication but unfortunately also to activate a person as an #MKULTRA Killer ("cyberwar") or kill the victim remotely with Toxic substances

NeroNexus Implants

Inventor José Manuel Rodríguez Delgado ~1950
Originally developed by Delgado, now been developed "in secrecy" since 60 Years, (by companies that are not publicly know) placed directly in the brain, like OpenBCI with software for pattern recognition recognizes common patterns of the EEG, which can then be analysed. No matter how good the encryption is, all vulnerable to side channel attacks [$f_c = \lambda / 2$]

Use Cases

Lie detector, read thoughts & emotions, remote control, influence emotions, automate victims (possible)

Quadrophonic

Inventor IVC
concreted in the apartment, cheats the preception so that the victim mind interprets the sounds as authentic, eg. neighbours

ControlUnit with 1990 Electronics / Technology:

2x Gravis Ultrasound Stereo
2x Sound Blaster Stereo
4x LPT & JDAC / CENT_DAC

Use Cases

For Therapy (remanence); But unfortunately also to make people aggressive (MKULTRA Killer) like dogs or to force them to fight against each other :)

Police / Police car

Inventor Romans
Etymologically, the term police is derived from the Greek πόλις, polis "city". It referred to the entire public administration (today as "construction police" and "fire police") outside of Greece as the fashion word of the Romans. Chessman of the authorities, and in many countries the police are the group of people who commit the most murders. See also "Americans 58 Times More Likely to Be Killed by Cops Than by Terrorists"

Use Cases

Violence, riots, often conflict rather escalating, often intimidating, biased preserving only the power of the upper class

SkinnerBOX

Inventor B. F. Skinner
Over electrodes on the floor he could give the mouse electroshocks = punishment / create aversion or animal cruelty ☹️
By pressing the Button the mouse was rewarded with a biscuit = reward / incentives / reward / feeding ☺️

Use Cases

The insane B.F. Skinner searched for sequences of **incentives** and **punishment**, to completely remote-control test-"object" and maybe also compensated his own low self-esteem by torturing animals or even kids, caused long-term damage

3D GAME-ENGINE (eg. CryEngine)

Inventor Silas Warner
Castle Wolfenstein (Muse Software)

Like a **SkinnerBOX**, but "innocently" wrapped as children's toys, invasive and non-invasive technologies; eg. Modular NeuroNexus Bluetooth interface, uplink to quadrophony, similar to a network monitoring system with Plug-INS, which are partially not even accessible by the user.

Use Cases

Game, fun, for therapy or "therapy", psychological profile ⇒ psychological warfare ⇒ to incite children to crimes (e.g., GTA) and then sue them it "legitimately"

Active Denial System

Inventor US Air Force
The Active Denial System roasts the top layer of the skin at a distance of 500m. For a range of 5 m logically more than 100 x smaller, small enough to fit in a cell phone. Actually, 1930s electron tube technology, but today you can do this also with semiconductors (Esaki-Tunnel diode). Directly in the CPU with Army-Grade Crypto . The "Active Denial System"-denial would thus be the natural archmesis of an TinFoil-hat

Use Cases

At a range of 500m or terrorize lodger with such scrap for "fun and profit", in combination with cars: t12, m15, m9, t11, t7

Microwave Hearing / Frey Effect

Inventor Allan H. Frey (Cornell Unit) Year ~1961
"Hears non-existent voices, hahaha" an invisible communication channels with pulsed microwaves transmitted to and received directly by the cochlea. Was 30 years not patented until 1989 under US487702. It is already with electron tubes been used in 1900s. **Psychological Perspective:** people that abuse such technology would find that very funny and previously labeled as a schizophrenic, the victim is completely defenseless and it is likely that it will run suicide or amok someday

Use Cases

In combination with e.g. a loop recorder, see also c02 Card, the perpetrators often caused permanent damage in the psyche of their victims (#Verdingkinder / #Schwabenkinder / #Slaves)
