Money

Inventor Satan **Year** ~0

The usual rhetorical automatism would be "**Everyone has his price**" even judges are for sale. We think "Everyone" is a rumor, but many young people do not realize, that their wages actually are paid by Satan (for example from the Army). Not informed by the company, that many people had to die in the name of the employer, and if the young employee would ask relevant questions the company would fire him.

Use Cases

Many rich people can easily hide murder and rape with enough money. They simply buy the judge that wears a price tag instead of moral and justice

They burn a trauma into the victim's psyche, in order to be able to reactivate the trauma (**reVictimizing ↔ Power ⇒ Power abuse**). In Rombachtali 11/13 there are so far 7 killings by one of the owners, so he ordered someone else to make a bullet hole to distract from the relevant scenes that would bring the assassin into jail. Step two seems to be, that the Killer bought the Judge.

Use Cases

If someone would find the "surveillance" infrastructure, and could proof that this surveillance does not just listen, the owner could not deny his complicity anymore. revictimizing **with simple gun shot sound**

People often know, that if they say the direct opposside of the things they should not have done. And if a kid does that too, then it is maybe an introjection of the behaviour parents show. Often people do like they are saints and just wants to play the sneak on the forbiden tree to "train the kids". Yes throwing with apples (in methaphysic manner) maybe makes sometimes sense, but not if the resulting actions are then abused to impose the will upon kids. then its just satan masked as a "saint".

Use Cases

Saying the complete opposide of the things done will give the person a better start but then after enough data is known about this person it's quite easy to lin the the dots to a complete image.

Stick (German: Peitsche)

Inventor Satan **Year** ~0

The brain automatically tells: pain (injuries) is bad, so the brain will try to save the pony from situations where it feels pain again, so the scene will be burned in the brain and in the future automatically avoided (avoidance behavior) Physical violence against children is prohibited by law but in Switzerland but unfortunately still very common.

Use Cases

Behavioural "Sciences" = to boss people around instead of educating them for "efficiency". The resulting late consequences are then to be payed by the community if they can be fixed at all... PTSD
